

# ALBERTANS' VIEWS ON ADVANCE CARE PLANNING & PALLIATIVE CARE

## Public Poll Report

September 15, 2025

Covenant Health  
Palliative Institute

# Contents

- 03 Background

---
- 04 Methodology

---
- 06 Summary of Key Findings

---
- 09 Detailed Findings

---
- 37 Subgroup Differences

---
- 42 Detailed Tables

---
- 62 Conclusions and Next Steps

---

---

**Low public awareness of palliative care and advance care planning constitutes a major barrier to the uptake of palliative care and advance care planning initiatives.**

- A lack of awareness, and/or understanding, of what palliative care entails can lead to negative impressions of palliative care, and reduce clinicians' willingness to recommend such care, and/or the likelihood of individuals accepting such care if offered.
- Similarly, low awareness of, and engagement in, advance care planning can result in individuals and families being unprepared for dealing with illness or injuries.

---

**In late 2020, the Covenant Health Palliative Institute undertook a multi-year, multi-sectoral Compassionate Communities initiative to increase public awareness and understanding of palliative care and advance care planning.** Public education tools have been adapted to the local context and implemented in collaboration with community partners.

---

**In March 2024, and again in August 2025, the Covenant Health Palliative Institute commissioned Ipsos Canada to conduct a public poll of Albertans to:**

- collect data on Albertans' awareness of palliative care and advance care planning;
- gather data around awareness of the concept of compassionate communities;
- inform future work by better understanding how and where Albertans would like to receive information about palliative care and advance care planning.

This survey includes 800 adult (18+) Albertans and was fielded online from August 11-21, 2025.

Survey results are compared to an identical survey of 802 Albertans fielded March 13-20, 2024.

Data have been weighted to reflect the Alberta population age 18+ based on Census data for region, age, gender and education.

The precision of Ipsos polls containing online data is measured using a credibility interval. In this case, the overall poll is accurate to within +/-4.0 percentage points, 19 times out of 20, had all Alberta adults been polled.

- The credibility interval will be wider among subsets of the population. All sample surveys and polls may be subject to other sources of error, including, but not limited to coverage error, and measurement error.

Due to rounding:

- Not all charts and tables in this report will add to exactly 100%.
- Not all summary statistics will be exactly equal to the sum of their component parts.

# SUMMARY OF KEY FINDINGS

Covenant Health  
Palliative Institute

**In 2025, four-in-ten (40%) Albertans have heard the term ‘advance care planning’.** This figure is consistent with 2024 (39%), and has been increasing over the past decade, with awareness at 26% in 2013 and 31% in 2019.

**Albertans are most likely to have had advance care planning conversations with family (51%),** a proportion that is consistent with previous years.

**Most Albertans do not have personal planning documents:** 41% have a will, 28% have a personal directive, and 28% have an enduring power of attorney.

Albertans think it is most important to do advance care planning **when you experience a change in your health (58%), when you make a will (47%), or when you become a parent or guardian (46%).**

**Healthcare providers (47%) are Albertans’ most preferred source for information on advance care planning and palliative care,** followed by family/friends (38%) and lawyers/legal professionals (30%).

**Nearly three-quarters (73%) of Albertans are either “very aware” or “somewhat aware” of palliative care.** This is consistent with 2024 (73%), but much higher than in 2016 (58%).

**Very few Albertans have heard the term Compassionate Communities** (15% in 2025, 13% in 2024).

**While a majority (62%) of Albertans agree that caring for people with serious illness is everyone’s responsibility,** only 33% are aware of supports available in their community, and 37% feel they would know how to support someone with a serious illness.

If a loved one were diagnosed with a serious illness, **Albertans would be most likely to access support from family (81%), friends (67%) or a hospice/palliative care society (63%).**

**More than 6 in 10 Albertans (61%) are comfortable talking about death, dying or grieving** with a family member or close friend, but only 9% report ‘often’ discussing this topic with their family.

Albertans want information about palliative care and/or advance care planning **via email (43%), print materials (34%, down from 42% in 2024), the internet (32%) and through in-person workshops/presentations (32%).**

# DETAILED FINDINGS

Covenant Health  
Palliative Institute

## **Preamble:**

*The next few questions are about advance care planning, palliative care, and community support for people living with a serious illness. By “serious illness”, we mean any illness, disease or condition that cannot be cured and will ultimately shorten a person’s life.*

# ADVANCE CARE PLANNING

Covenant Health  
Palliative Institute

# Awareness of Advance Care Planning

Four-in-ten (40%) Albertans have heard of advance care planning (undefined). With the benefit of a definition, awareness rises to two-thirds (67%) of Albertans.

**Definition provided:** Advance care planning is a process of thinking about, talking about, and sometimes documenting the kinds of care you would want, and who you would like to speak for you, if you were too ill or injured to speak for yourself.

Q1. Have you ever heard of ‘advance care planning’?

Q2. Advance care planning is a process of thinking about, talking about, and sometimes documenting the kinds of care you would want, and who you would like to speak for you, if you were too ill or injured to speak for yourself. Based on this definition, have you heard of advance care planning?

Base: All respondents 2025 (n=800), 2024 (n=802)

↑↓ statistically significant differences from 2024

# Advance Care Planning Thoughts and Conversations

Two-thirds (66%) of Albertans say they have given at least “some thought” to what kind of health and personal care they would like to receive if they became seriously ill, although fewer than two-in-ten (16%) have given this “a lot of thought”.  
About half (51%) of Albertans say they have talked to family about what kind of health and personal care they would like to receive if they became too ill or injured to speak for themselves. Nearly four-in-ten (38%) have not talked to anyone.

Q3. How much thought have you given to what kind of health and personal care you would like to receive if you became seriously ill?

Q4. Have you talked with anyone about what kind of health and personal care you would like to receive if you became too ill or injured to speak for yourself? Select all that apply.

Base: All respondents 2025 (n=800), 2024 (n=802)

↑↓ statistically significant differences from 2024

# Personal Planning Documents

About four-in-ten (41%) Albertans say they have a will. Closer to three-in-ten have a personal directive (28%) and an enduring power of attorney (28%).

- Q5. Do you have a personal directive? (A personal directive is the legal document in Alberta that records who you want to make personal and healthcare decisions for you if you are unable.)
- Q6. Do you have an enduring power of attorney? (An enduring power of attorney is a legal document that gives another person the authority to make financial decisions on your behalf.)
- Q7. Do you have a will? (A will is a document that outlines how you would like your property and possessions distributed after your death. It also allows you to name a guardian for any children who are minors at the time of your death.)

Base: All respondents 2025 (n=800), 2024 (n=802)

↑↓ statistically significant differences from 2024

# Awareness of MyAHS Connect

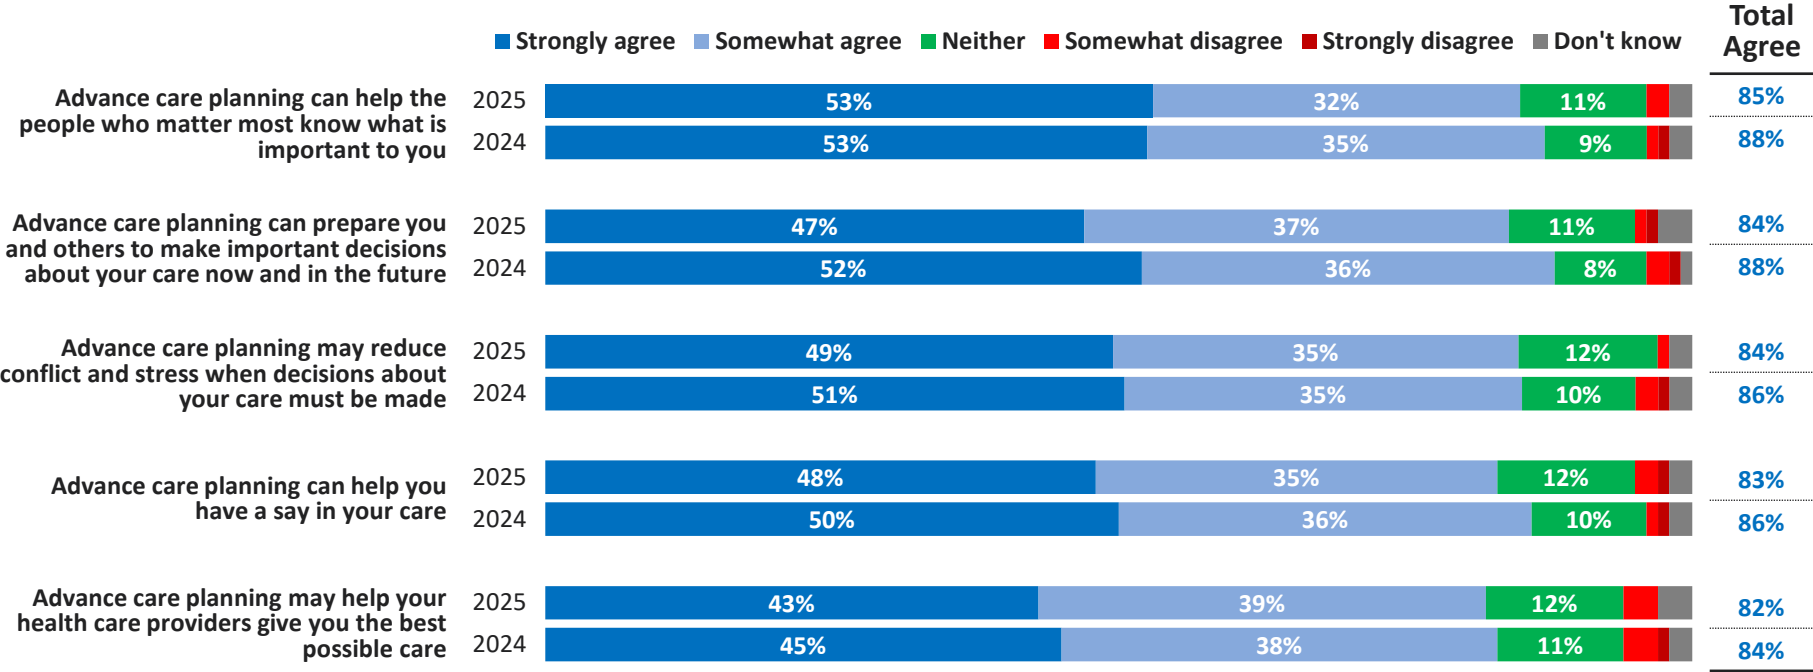

Very few (13%) Albertans are aware they can upload their advance care planning documents to their MyAHS Connect account.

Q8. Did you know that you can upload your advance care planning documents, such as your personal directive, to your MyAHS Connect account?  
(MyAHS Connect is a secure, online, interactive tool, provided by Alberta Health Services, that lets you see some of your personal health information.)

# Beliefs About Advance Care Planning

Most Albertans believe that advance care planning helps themselves and others be prepared for future care decisions.

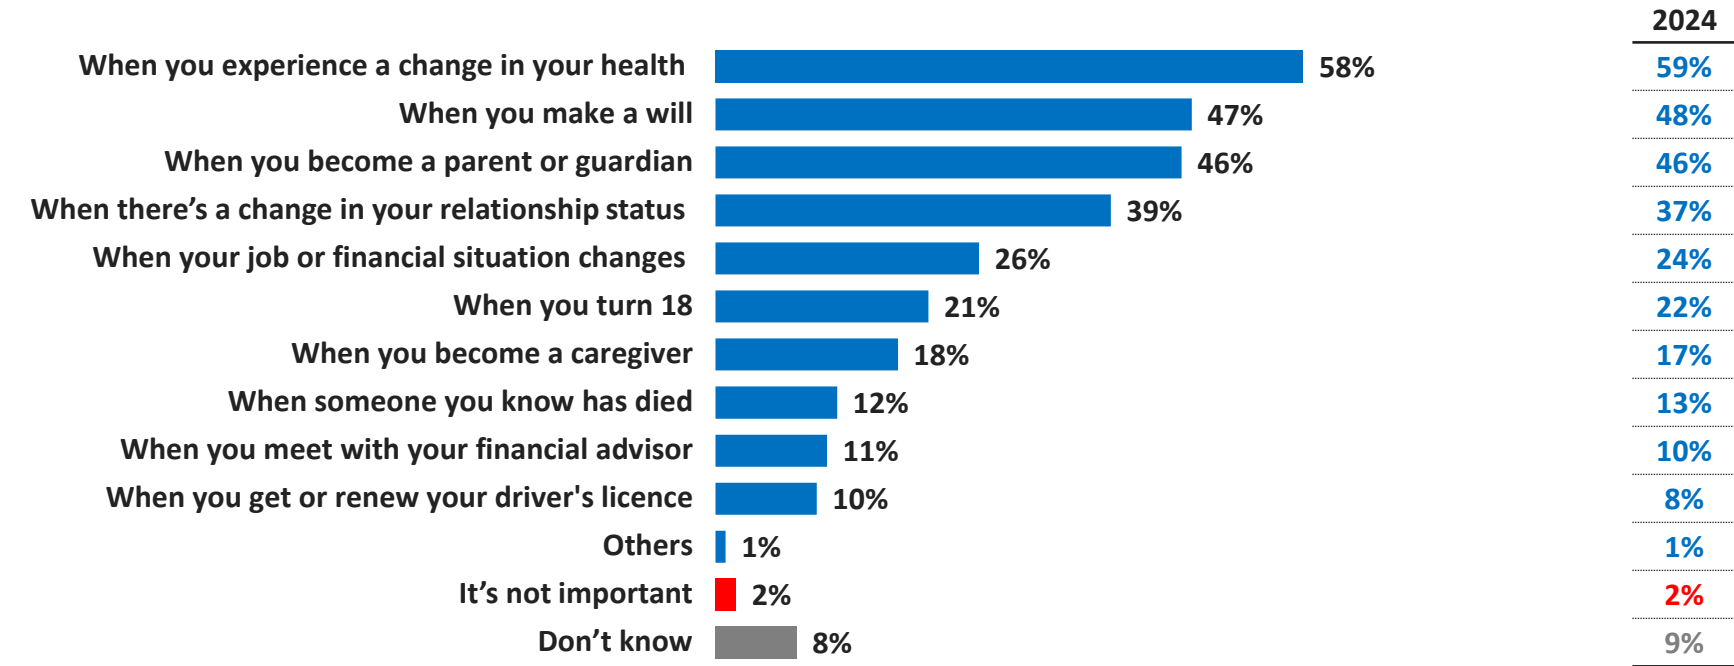

Q9. Please rate how much you agree/disagree with the following statements. For reference: Advance care planning is a process of thinking about, talking about, and sometimes documenting the kinds of care you would want, and who you would like to speak for you, if you were too ill or injured to speak for yourself.

# When Important to do Advance Care Planning

Albertans are most likely to say that advance care planning is important to do when you experience a change in your health (58%). They are next most likely to say advance care planning is important when you make a will (47%), when you become a parent or guardian (46%) and when there's a change in your relationship status (39%).

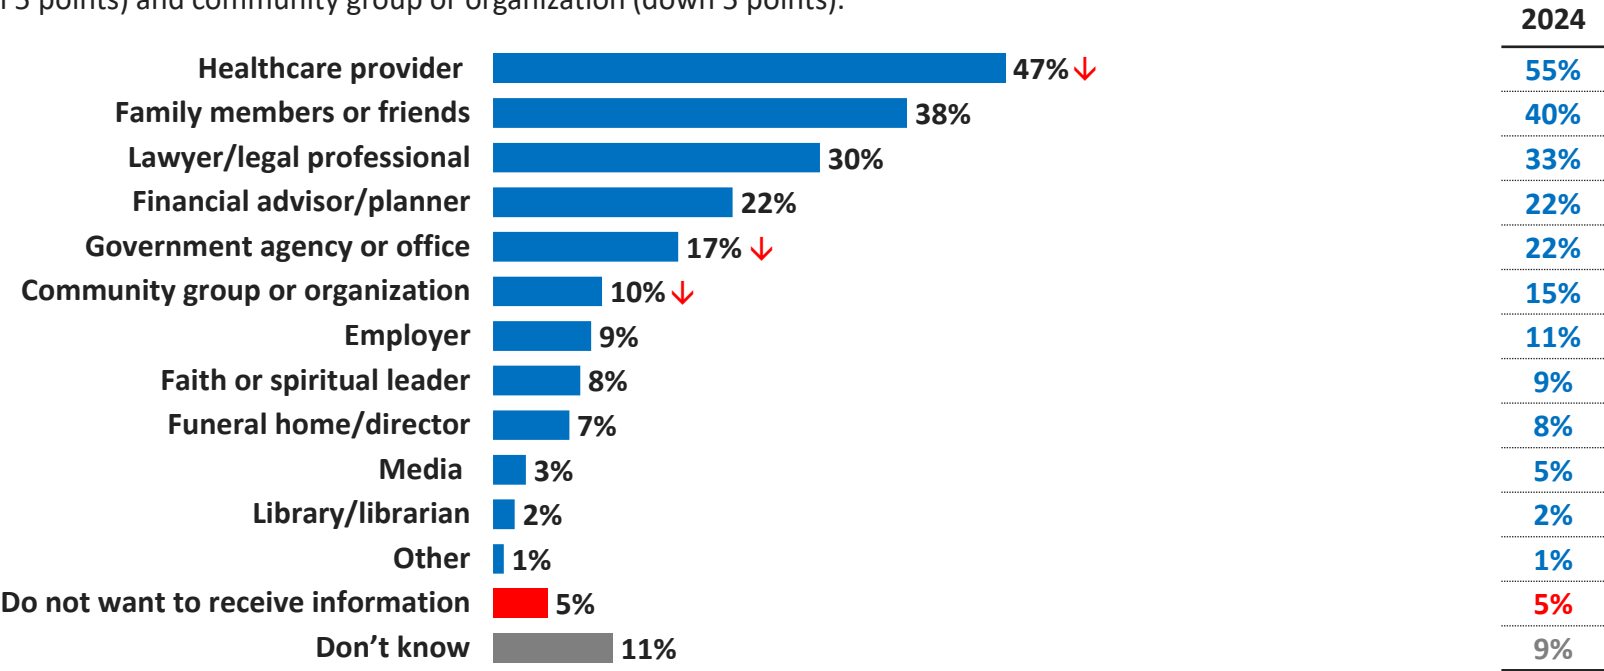

Q10. Thinking of the following situations, when do you think it is important to do advance care planning? Select all that apply.  
Base: All respondents 2025 (n=800), 2024 (n=802)

↑↓ statistically significant differences from 2024

# Preferred Sources of Advance Care Planning Information

Albertans would most like to receive information about advance care planning from their healthcare provider (47%), followed by family/friends (38%) and lawyers/legal professionals (30%).

Compared to 2024, mentions have statistically declined for healthcare providers (down 8 points), government office or agency (down 5 points) and community group or organization (down 5 points).

Q11. From whom would you prefer to receive information about advance care planning? Select all that apply.

Base: All respondents 2025 (n=800), 2024 (n=802)

↑↓ statistically significant differences from 2024

# PALLIATIVE CARE

Covenant Health  
Palliative Institute

## **Preamble:**

*The following questions are about palliative care. Palliative care is care to relieve the symptoms and stress of living with a serious illness. The goal of palliative care is to help people live as well as possible.*

# Awareness of Palliative Care

Nearly three-quarters (73%) of Albertans say they are either “very aware” (24%) or “somewhat aware” (48%) of palliative care.

21 Q12. How would you describe your awareness of palliative care?  
Base: All respondents 2025 (n=800), 2024 (n=802)

↑↓ statistically significant differences from 2024

# Knowledge and Attitudes Toward Palliative Care (slide 1 of 2)

Compared to 2024, there has been a statistically significant 6-point drop in agreement that palliative can benefit people living with any serious illness (70% vs. 76% in 2024).

Q13. Please rate how much you agree/disagree with the following statements.  
Base: All respondents 2025 (n=800), 2024 (n=802)

↑↓ statistically significant differences from 2024

# Knowledge and Attitudes Toward Palliative Care (slide 2 of 2)

Compared to 2024, there has been a statistically significant 8-point drop in agreement that Albertans would be comfortable talking about palliative care with a family member or close friend (67% vs. 75% in 2024).

Q13. Please rate how much you agree/ disagree with the following statements.  
Base: All respondents 2025 (n=800), 2024 (n=802)

↑↓ statistically significant differences from 2024

# Personal Experience with Palliative Care in Past 10 Years

One-third (33%) of Albertans say they or someone important to them has received palliative care within the past 10 years.

Q14. Within the past 10 years, have you or someone important to you received palliative care?

Base: All respondents 2025 (n=800), 2024 (n=802)

↑↓ statistically significant differences from 2024

# Preferred Sources of Palliative Care Information

A healthcare provider (58%) is the most preferred source of information about palliative care, followed by a family member or friends (39%). No other source is mentioned by more than 17% of Albertans.

Compared to 2024, mentions have statistically declined for government office or agency (down 5 points), faith or spiritual leader (down 4 points) and employer (down 4 points).

Q15. From whom would you prefer to receive information about palliative care? Select all that apply.

Base: All respondents 2025 (n=800), 2024 (n=802)

↑ ↓ statistically significant differences from 2024

# COMMUNITY SUPPORT FOR LIVING WITH A SERIOUS ILLNESS

Covenant Health  
Palliative Institute

## **Preamble:**

*The following questions are about community support for people living with a serious illness. By “serious illness” we are referring to illnesses, diseases or conditions that cannot be cured and will ultimately shorten a person’s life. By “community” we mean those with whom you have a relationship and share interests, such as those in your neighbourhood, faith group, or a social or cultural organization.*

# Awareness of Compassionate Communities

Fewer than two-in-ten (15%) Albertans say they have heard of the term Compassionate Communities.

Q16. Have you heard of the term Compassionate Communities?

Base: All respondents 2025 (n=800), 2024 (n=802)

↑↓ statistically significant differences from 2024

# Community Support for People Living with a Serious Illness

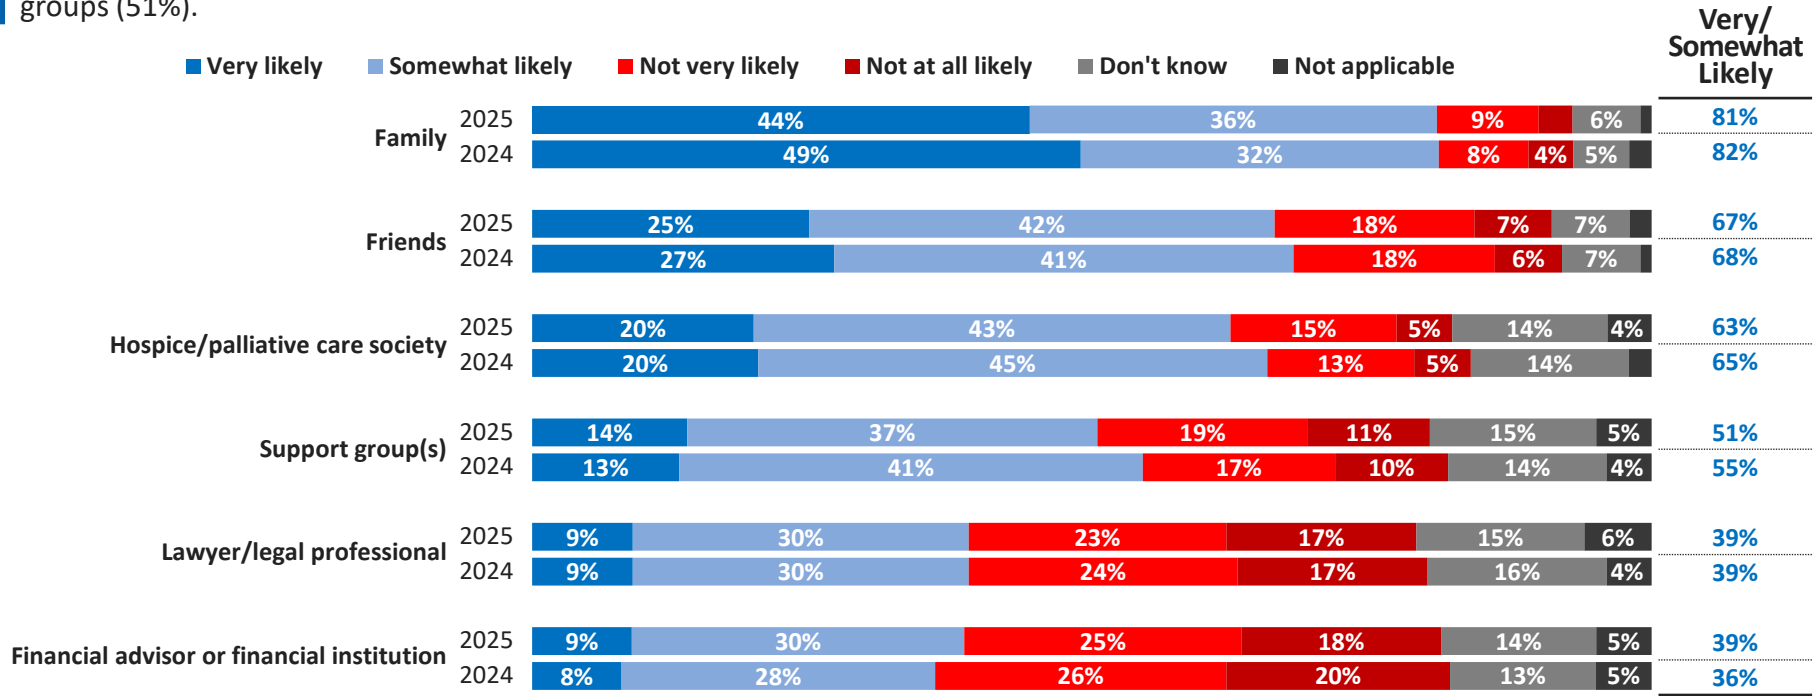

Compared to 2024, there has been a statistically significant 6-point drop in agreement that Albertans know how to support someone in their community who is living with a serious illness (37% vs. 43% in 2024).

29 Q17. Please rate how much you agree/disagree with the following statements.  
Base: All respondents 2025 (n=800), 2024 (n=802)

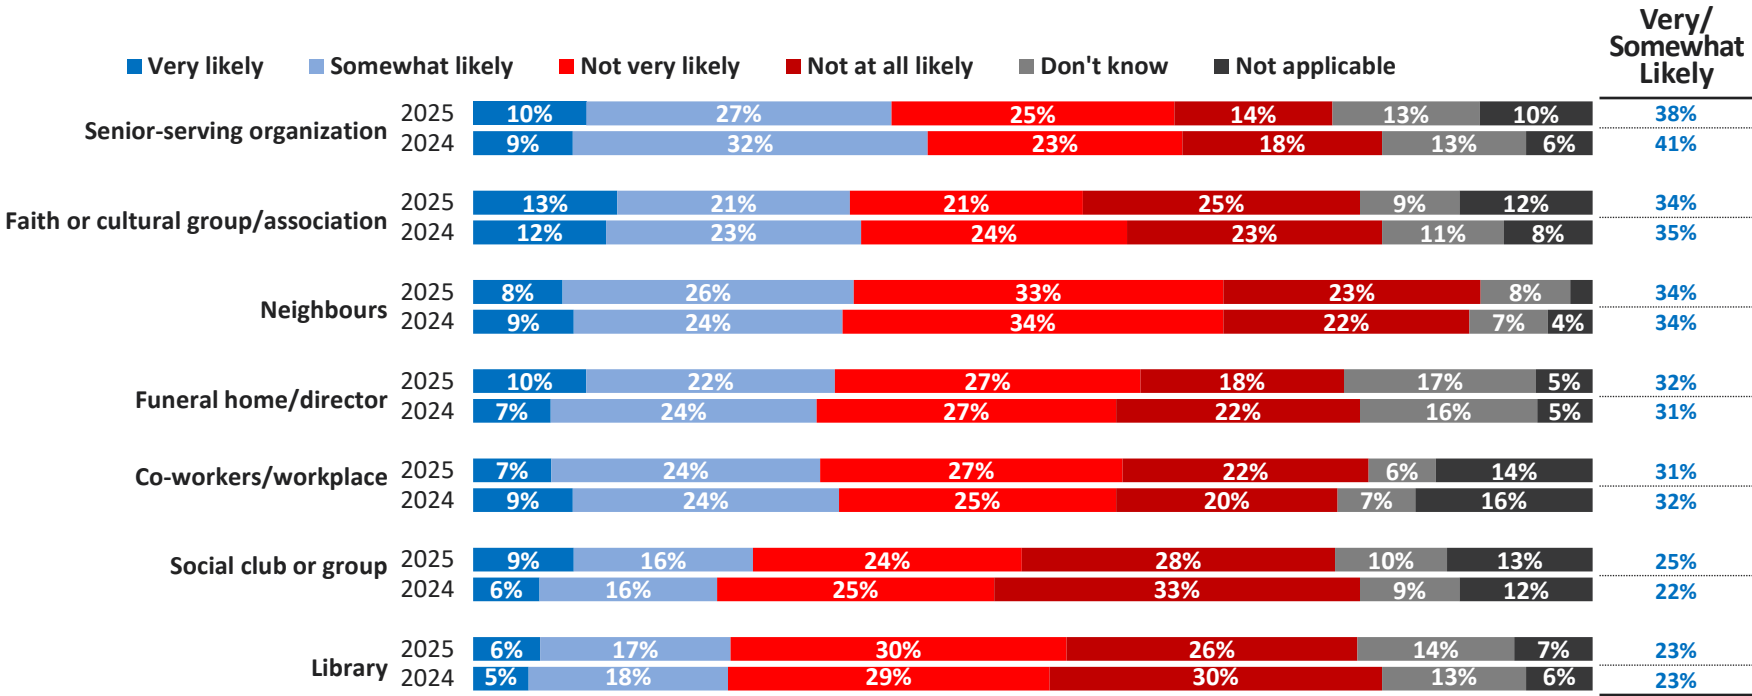

# Likelihood to Access Community Supports (slide 1 of 2)

Albertans would be most likely to access support from family (81% very or somewhat likely) if they or a loved one were diagnosed with a serious illness. Other top sources of support include friends (67%), a hospice/palliative care society (63%) and support groups (51%).

# Likelihood to Access Community Supports (slide 2 of 2)

Albertans would be least likely to access support from a library (23% very or somewhat likely) or a social club/group (25%) if they or a loved one were diagnosed with a serious illness.

Q18. If you or a loved one were diagnosed with a serious illness, how likely would you be to access support (e.g., emotional support, spiritual support, or day-to-day support for things like meal preparation, childcare, or transportation) from the following?

Base: All respondents 2025 (n=800), 2024 (n=802)

↑↓ statistically significant differences from 2024

# COMFORT TALKING ABOUT DEATH AND DYING

Covenant Health  
Palliative Institute

# Comfort Talking About Death, Dying or Grieving

Six-in-ten (61%) Albertans say they would be comfortable (very or somewhat) talking about death, dying or grieving with a family member or close friend. This is a statistically significant 6-point decline compared to 2024.

Q19. How comfortable do you, or would you, feel talking about death, dying or grieving with a family member or close friend?  
Base: All respondents 2025 (n=800), 2024 (n=802)

↑ ↓ statistically significant differences from 2024

# Frequency of Discussing Death and Dying

Nearly half (46%) of Albertans say they “often” or “sometimes” discuss death and dying with their family, and almost one-quarter (23%) say they “often” or “sometimes” discuss death and dying in their community.

Q20. Please indicate how often you do each of the following.  
Base: All respondents 2025 (n=800), 2024 (n=802)

↑↓ statistically significant differences from 2024

# PREFERRED INFORMATION FORMATS

Covenant Health  
Palliative Institute

# Preferred Information Formats

The most preferred formats for information about palliative care and/or advance care planning include email (43%), print materials (34%), internet other than social media (32%) and in-person workshops/presentations (32%). Compared to 2024, mentions have statistically declined for print materials (down 8 points) and online webinars/presentations (down 5 points).

Q21. In what format would you prefer to receive information about palliative care and/or advance care planning? Select all that apply.

Base: Excluding those who earlier said they do not want this information 2025 (n=800), 2024 (n=772)    ↑↓ statistically significant differences from 2024

# SUBGROUP DIFFERENCES

Covenant Health  
Palliative Institute

# Differences Among Subgroups\*

## AGE

Compared to Albertans aged 18-34, Albertans aged 55+:

- Are more likely to have all three advance care planning documents
- Have lower awareness of MyAHS Connect
- Have higher awareness of palliative care
- Are more comfortable talking about palliative care
- Are less aware of the term 'Compassionate Communities'
- Are more likely to have had personal experience with palliative care in the past 10 years
- Are less likely to know how to support someone living with a serious illness
- Have a higher preference for information in the form of email, print materials and online presentations or webinars, and a lower preference for social media

*\*Few differences were observed by region of Alberta. Refer to Detailed Tables.*

## Differences Among Subgroups Cont'd

### GENDER

Compared to women, men:

- Are more likely to have all three advance care planning documents
- Are more likely to believe that palliative care can be provided together with other life prolonging medical treatments
- Are less likely to discuss death and dying in their family

# Differences Among Subgroups Cont'd

## EDUCATION

Compared to respondents with high school education or less, university graduates:

- Have higher awareness of advance care planning (defined and undefined)
- Are more likely to have all three advance care planning documents
- Have higher awareness of MyAHS Connect
- Are more likely to have had advance care planning conversations
- Are more likely to believe in the benefits of advance care planning and palliative care
- Are more likely to have had personal experience with palliative care in the past 10 years
- Are more aware of the term 'Compassionate Communities'
- Are more likely to know how to support someone living with a serious illness
- Are less likely to discuss death and dying in their family
- Have a higher preference for information in all formats except television

# Differences Among Subgroups Cont'd

## RACE-BASED IDENTITY

Compared to non-white Albertans, white Albertans:

- Are less likely to have had advance care planning conversations
- Are more likely to have a will
- Have lower awareness of MyAHS Connect
- Are more likely to believe in the benefits of advance care planning
- Have higher awareness of palliative care
- Are more likely to have had personal experience with palliative care in the past 10 years
- Have lower awareness of the term 'Compassionate Communities'
- Are less likely to know how to support someone living with a serious illness
- Are more comfortable talking about death, dying or grieving with family or friends
- Are more likely to discuss death and dying in their family, but less likely in their community
- Have a higher preference for information in the form of print materials, and a lower preference for videos, and social media

# DETAILED TABLES

Covenant Health  
Palliative Institute

# Awareness of Advance Care Planning by Demographic Subgroups

Aided and unaided awareness of advance care planning is higher among university graduates.

|                              | Total | Region |     |            | Sex  |        | Age   |       |     | Education            |              |                     | Race  |           |

Q3. How much thought have you given to what kind of health and personal care you would like to receive if you became seriously ill?

Q4. Have you talked with anyone about what kind of health and personal care you would like to receive if you became too ill or injured to speak for yourself? Select all that apply.

Base: All respondents (n=802)

# Personal Planning Documents by Demographic Subgroups

Older Albertans, men and university graduates are more likely to have all three planning documents. White residents are more likely than non-white residents to have a will.

|   | Total | Region |     |            | Sex  |        | Age   |       |     | Education            |              |                     | Race  |           |

|   |       |        |     |            |      |        |       |       |     | Statistically higher |              | Statistically lower |       |           |

Q5. Do you have a personal directive? (A personal directive is the legal document in Alberta that records who you want to make personal and healthcare decisions for you if you are unable.)

Q6. Do you have an enduring power of attorney? (An enduring power of attorney is a legal document that gives another person the authority to make financial decisions on your behalf.)

Q7. Do you have a will? (A will is a document that outlines how you would like your property and possessions distributed after your death. It also allows you to name a guardian for any children who are minors at the time of your death.)

# Awareness of MyAHS Connect by Demographic Subgroups

Younger residents, non-white residents and university graduates are more aware that they can upload their advance care planning documents to their MyAHS Connect account.

|             | Total | Region |     |            | Sex  |        | Age   |       |     | Education            |              |                     | Race  |           |

Statistically higher Statistically lower

Q9. Please rate how much you agree/disagree with the following statements. For reference: Advance care planning is a process of thinking about, talking about, and sometimes documenting the kinds of care you would want, and who you would like to speak for you, if you were too ill or injured to speak for yourself.

# When Important to do Advance Care Planning by Demographic Subgroups

Though there are many statistical differences in the table below, experiencing a change in health is the number one trigger for advance care planning for all demographic segments.

|   | Total | Region |     |            | Sex  |        | Age   |       |     | Education  |              |           | Race  |           |

# Community Support for People Living with a Serious Illness by Demographic Subgroups

Younger and non-white respondents are more likely to agree they know how to support someone in their community who is living with a serious illness and to agree that they are aware of the support available in their community for people living with a serious illness. University graduates and Calgary residents are more likely to agree it is everyone's responsibility to help each other through serious illness and caregiving.

Q19. How comfortable do you, or would you, feel talking about death, dying or grieving with a family member or close friend?

Base: All respondents (n=802)

# Frequency of Discussing Death and Dying by Demographic Subgroups

White respondents are more likely than non-white respondents to discuss death and dying in their family. However, non-white respondents are more likely than white respondents to have these discussions in their community. Younger residents are also more likely to say they have these discussions in their community

## Discuss Often/Sometimes

|  | Total | Region |     |            | Sex  |        | Age   |       |     | Education            |              |           | Race                |           |

# Preferred Information Formats by Demographic Subgroups

Email is the most preferred information format for all demographic segments.

The biggest gap in preferred format is that older residents have a much bigger preference for print materials.

Q21. In what format would you prefer to receive information about palliative care and/or advance care planning? Select all that apply.

Base: Excluding those who earlier said they do not want this information (n=773)

## Conclusions and Next Steps

Public awareness of palliative care and advance care planning in Alberta has been trending upward over the past decade. More could still be done to ensure that this awareness translates into actions such as having conversations about planning ahead, palliative care, death, dying or grieving, preparing personal planning documents, and building supportive communities. This survey also provides insight into when, where and how Albertans would like to receive information about advance care planning and palliative care – knowledge that can be leveraged to ensure education efforts are timely, relevant and accessible.

To complement the ongoing, outstanding work being done by many organizations to improve care and support for people who are sick, dying or grieving, the Palliative Institute has developed resources to help Albertans plan ahead, learn about palliative care, build community support for people living with serious illness, and talk about death and dying.
